

PRESS RELEASE

New conveyor belt for Rotex

Vicon Introduces new conveyor belt for Rotex 402, 452, 552

01.09.2018, Kerteminde, Denmark

Vicon launches its new side delivery belt for loader wagons with discharge roller. A convenient system for daily grazing with easy operation.

Convenient add on for depositing

2300mm x 800mm to deposit

A cross conveyor belt allows depositing feed in a regular and flat feed swath. Feed to be pushed later remains fresh, the feed intake of the cows increases. With this unique, reliable and long-life cross conveyor belt you and your cows only can benefit.

Flexible and efficient belt

The conveyor belt itself is equipped with conveying slats of different heights. On the side of the machine, there are lower slats on the rugged PVC belt, providing for clog-free transport of the feed. On the opposite side of the discharge door, higher slats considerably increase the conveying performance. As the slats are divided in the middle, the belt remains flexible even with different load and is therefore reliable and low-wear. A profile welded inside ensures that the belt runs exactly straight.

Double drive

Drive motors on both sides always drive the conveyor belt in pull direction, no matter what side discharge is carried out. Together with the self-cleaners inside, this design reduces wear to a minimum.

Robust frame construction

With the heavy-duty undercarriage in combination with a sliding system, the conveyor belt is settled stable underneath the wagon. For transport, the conveyor belt can therefore be slide underneath the wagon or just kept out.

Easy to operate

With the ISOBUS connection, it is an easy operation from the Terminal. All adjustments like scraper floor speed and deposit direction have to be selected from the cabin. The conveyor belt can be slide in/out manually by one person.

Robust undercarriage for transport and/or when using as common loader wagon.
